Video 1: Genetic Mutation

- I saw:
- 1) Robot eating mutant plant
 - 2) a four leaf clover  lucky
 - 3) DNA being repaired (fixed)  normal

- Questions I have:
- 1) How does cancer begin?
 - 2) Why does a mutation happen?
 - 3) When does a mutation happen?
 - 4) What kind of DNA mutates?
 - 5) Where does mutation happen?

Put a * next to the questions you think you can answer

4) DNA was damaged

5) The birds had different (mutated) beaks

6) The cells divided (mitosis)

Powerful energy waves

chemicals
radiation
viruses

Answers to our questions

- 1) Deleterious Mutations that cause uncontrolled cell growth
- 2) Environmental causes or random (by chance)
- 3) During cell division when DNA repair doesn't work
- 4) All organismal DNA
- 5) In cells' DNA
